Mycapssa[®]
(octreotide) capsules
20mg

The **first and only oral somatostatin analog (SSA)** capsule for the management of appropriate patients with acromegaly.

INDICATION AND IMPORTANT SAFETY INFORMATION

What is MYCAPSSA (octreotide) for?

MYCAPSSA is an oral prescription medicine used in the long-term maintenance treatment of acromegaly in people for whom initial treatment with octreotide or lanreotide has been effective and tolerated.

What are the possible side effects of MYCAPSSA?

The most common side effects are headache, joint pain, nausea, weakness, diarrhea, and sweating a lot.

Please see additional Important Safety Information throughout this brochure and full Patient Information.

The first and only oral somatostatin analog (SSA) for the treatment of appropriate patients living with acromegaly.

INDICATION AND IMPORTANT SAFETY INFORMATION (Continued)

What is MYCAPSSA (octreotide) for?

If octreotide and lanreotide are effective and your body is tolerating it, you may be eligible to take MYCAPSSA instead of the injections. Ask your doctor if this oral treatment is appropriate for you.

- ✓ MYCAPSSA is an alternative to SSA injections that can **eliminate the need for a painful administration**
- ✓ In clinical trials, MYCAPSSA was shown to be **generally well tolerated**
- ✓ In clinical studies, MYCAPSSA effectively maintained **normal IGF-I and GH levels in the majority of patients**
- ✓ Twice daily oral dosing of MYCAPSSA offers **consistent hormonal control**
- ✓ MYCAPSSA capsules provide the opportunity to comfortably and conveniently manage your acromegaly treatment **at home, or wherever you are**

INDICATION AND IMPORTANT SAFETY INFORMATION (Continued)

What is the most important safety information I should know?

MYCAPSSA can cause problems with the gallbladder. Tell your healthcare provider if you have any of these symptoms: sudden pain in your upper right stomach (abdomen) or right shoulder or between your shoulder blades; yellowing of your skin or the whites of your eyes; fever with chills; or nausea.

MYCAPSSA may affect your blood sugar, thyroid hormone, or vitamin B12 levels. Tell your healthcare provider if you have any problems or conditions related to these. Your healthcare provider may monitor these levels during your treatment with MYCAPSSA.

Tell your healthcare provider if you have an irregular heartbeat.

TAKING MYCAPSSA

GETTING STARTED ON MYCAPSSA

The safety and efficacy of MYCAPSSA was studied in **two clinical trials** with **183 patients living with acromegaly** who previously responded to and tolerated SSA injectable treatment with octreotide or lanreotide.

56 patients with acromegaly participated in the main clinical study, which focused on safety and how MYCAPSSA works in patients. The following outcome was reported at 9 months:

NEARLY 60% OF PATIENTS

responded and maintained their response to MYCAPSSA at the end of the study, at 9 months.

Additionally, the following results were observed in other analyses:

92% OF THE PATIENTS

who responded to MYCAPSSA at 6 months, with IGF-I levels in the normal range, continued to respond at 9 months.

90% OF PATIENTS

who completed the study on MYCAPSSA chose to continue to manage their acromegaly with MYCAPSSA.

“

During the clinical trial, my levels were under control and I wasn't having to work up the courage to hurt myself with a needle every 28 days. The way MYCAPSSA worked for me, in the convenience of an oral option, was what I had been waiting for.

- JIM, LIVING WITH ACROMEGALY

”

Jim participated in a clinical trial for MYCAPSSA.

INDICATION AND IMPORTANT SAFETY INFORMATION (Continued)

Who should not use MYCAPSSA?

MYCAPSSA can cause a serious allergic reaction including anaphylactic shock. Stop taking MYCAPSSA right away and get emergency help if you have any of these symptoms: swelling of your tongue, throat, lips, eyes or face; trouble swallowing or breathing; severe itching of the skin with rash or raised bumps; feeling faint; chest pain; or rapid heartbeat.

Do not use MYCAPSSA if you are allergic to octreotide or any other ingredients in MYCAPSSA. If you need to know the ingredients, ask your healthcare provider or pharmacist.

How safe is MYCAPSSA?

WHAT CAN I EXPECT FROM MYCAPSSA?

HOW SAFE IS MYCAPSSA?

HOW DOES THE MYCAPSSA CAPSULE WORK?

TAKING MYCAPSSA

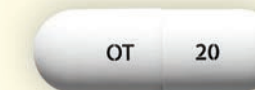

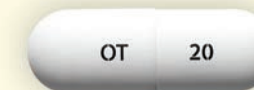

GETTING STARTED ON MYCAPSSA

In clinical studies, MYCAPSSA was shown **TO BE GENERALLY WELL TOLERATED**

AND IT CAN HELP AVOID INJECTION-RELATED SIDE EFFECTS.

With twice daily MYCAPSSA, you can manage your acromegaly treatment comfortably and conveniently from home, or wherever you are.

MYCAPSSA can cause problems with the gallbladder (especially in those with a history of gallstones). The most common side effects of MYCAPSSA are:

- headache
- joint pain
- nausea
- weakness
- diarrhea
- sweating a lot

INDICATION AND IMPORTANT SAFETY INFORMATION (Continued)

Who should not use MYCAPSSA?

If you have certain other medical conditions, you should use MYCAPSSA with caution. Tell your healthcare provider about all your medical conditions, especially the following: pregnancy or breastfeeding; liver disease; kidney disease; or difficulty in emptying bladder completely.

Tell your healthcare provider about all the medicines you take. MYCAPSSA may affect the way other medicines work, and other medicines may affect how MYCAPSSA works.

I finally had the opportunity to experience control of my IGF-I and GH levels without the pain and inconvenience of my injections.

- SHANNON, LIVING WITH ACROMEGALY

Shannon participated in a clinical trial for MYCAPSSA.

How does the MYCAPSSA capsule work?

The main ingredient of MYCAPSSA is octreotide, a well-known and proven medication.

MYCAPSSA capsules work by using a unique technology called **Transient Permeability Enhancer or TPE®**.

Powered by TPE technology, MYCAPSSA capsules allow octreotide to be absorbed more easily by the body.

How is MYCAPSSA packaged?

Each MYCAPSSA wallet comes with 28 capsules in a slim and convenient package.

1.

If you and your healthcare team determine that MYCAPSSA is right for you, your doctor will tell you **how many capsules you should take each morning and evening.**

2.

It's important to schedule your MYCAPSSA doses around meals. **Each dose of MYCAPSSA should always be taken on an empty stomach and only with a glass of water. Do not eat any food at least 2 hours before taking MYCAPSSA and at least 1 hour after taking MYCAPSSA.** That means, there should not be any food in your stomach for a total of 3 hours with each MYCAPSSA dose.

3.

Once you've started on MYCAPSSA, **your doctor may decide to adjust the number of capsules you take each day** depending on your IGF-I hormonal levels or your acromegaly signs and symptoms. This will help ensure you are receiving the right amount of medicine to properly manage your acromegaly.

4.

Follow your doctor's instructions for MYCAPSSA and all other medications you may be taking.

INDICATION AND IMPORTANT SAFETY INFORMATION (Continued)

What are the possible side effects of MYCAPSSA?

Talk to your healthcare provider if you have any side effect that bothers you or that does not go away. You may report side effects to the FDA at 1-800-FDA-1088.

Keep MYCAPSSA and all medicines out of the reach of children.

“

I'd been hoping for an oral treatment for my acromegaly since my first monthly injection. Now that it's here, and I was able to participate in the clinical trial for MYCAPSSA, I no longer live dreading those painful injections. I love the freedom of taking MYCAPSSA.

- SHANNON, LIVING WITH ACROMEGALY
